Heart Report

{{ fname }} {{ lname }}

The following heart report is generated automatically on the basis of medical details you preovided earlier.

Please read carefully and print this report for further medical treatment.

Maximum Heart Rate: {{ thalach }}

It is recommended that you exercise within 55 to 85 percent of your maximum heart rate for at least 20 to 30 minutes to get the best results from aerobic exercise. The MHR (roughly calculated as 220 - your age) is the upper limit of what your cardiovascular system can handle during physical activity.

Resting Blood Pressure: {{ trestbps }}

Follow a healthy lifestyle to keep it at this level. More than 120 over 80 and less than 140 over 90 (120/80-140/90). You have a normal blood pressure reading but it is a little higher than it should be, and you should try to lower it.

Fasting Blood Sugar: {{ fbs }}

For the majority of healthy individuals, normal blood sugar levels are: Between 4.0 to 5.4 mmol/L (72 to 99 mg/dL) when fasting. Up to 7.8 mmol/L (140 mg/dL) 2 hours after eating.

Predicted disease type: {{ predicted }}
